We asked

Tranvías de Sevilla

Tranvías de Sevilla automates their drivers' cash deposits with the CDS 830PT that until now was based on the "traditional bag". With the machine from SCAN COIN, the driver tells how much he has collected, deposits it and receives a ticket with the actual amount. A quick and secure solution for all parties!

What benefits have you noted for the company?

Both the company's work with cash management and how the drivers handle their cash have been greatly helped by the improvement and simplification in how cash is handled thanks to the acquisition of the new CDS 830PT.

In this way, the company has the information about declared amount, what was really deposited and the difference (if any) and the information is compared to the data from the ticket systems on board. This automation eliminates manual and costly processes like being dependent on the deposit box, no more counting errors and it frees the drivers of their collected cash.

"More than 8,500 drivers make their deposits in our systems."
