

SCAN COIN CDP 4 Cash Deposit Point

CDP 4 Front Service

CDP 4 Rear Service

SCAN COIN CDP 4 opens up new possibilities for transport companies by combining effective cash management solutions with advanced networking capability.

Business system integration

CDP 4 offers much more than fast, accurate processing of banknotes, coins and transport tokens. With CDP 4, drivers deposit valuable information for your transport company along with the cash. The unit can be easily integrated into a company's computer network to become a source of important data for your business system. A built-in Windows™-based PC provides the connectivity needed for rapid reconciliation of expected cash against ticket receipts, storing deposit information and making it available via your network for correlation and analysis.

Easy access and installation

CDP 4 gives you access alternatives to suit your premises. You can select front or rear access for emptying. Front or rear access can also be specified for servicing of the system. Installing the CDP 4, either as a "lobby" or "through-the-wall" (vestibule) unit is a fast, easy process causing minimal on-site disruption.

Optional banknote reader.

Network capability.

Envelope drop safe.

High capacity printer.

USB connectivity.

Secure solutions for cash and non-cash items

Deposited cash is stored in secure, self-locking coin and note vaults. One of the major benefits of the easy upgrade to CDP 4 from previous versions is that existing base cabinets, safes and vaults are compatible.

Drivers can deposit non-cash items such as credit card slips, cheques and tickets issued in error, in a separate envelope drop safe, at the same time as they deposit cash.

Software for smooth operation

SCAN COIN Orchard System software can handle up to four currencies as standard, and ensures smooth integration of the unit's hardware elements with the fully-customisable driver-interface.

A better driver-interface

The driver-friendly interface can play an important role in communicating with staff and gathering information. Drivers can be asked to give their driver number and vehicle number. The system can also be used to request information on vehicle status to build up a defect log. A range of other applications can be added according to your company's needs.

ACCESSORIES/OPTIONS

CDP4-FS	Coin Deposit Unit Front Service, non-sorting with escrow
CDP4-RS	Coin Deposit Unit Rear Service, non-sorting with escrow
